1 The AI-First GTM Revolution

A new role is emerging across every revenue function

*A new role is emerging across go-to-market organizations: **the AI operator**. They exist in every GTM function — Sales, Marketing, RevOps, Growth, Enablement, Product Marketing — and they share a common trait: they don't just use AI tools, they build the agent systems that make their entire team better.*

An AI operator in Sales builds agents that prep every rep before every call. In RevOps, they architect pipelines that update themselves. In Product Marketing, they deploy agents that analyze 100% of discovery calls instead of a 5% sample. The function varies, but the mindset is the same: **think in systems, build with agents, compound over time**.

This ebook presents the many **colors of AI operators** across GTM. Each chapter is a real use case, grounded in customer stories, showing how these operators are reshaping how revenue gets built — from knowledge access to outreach at scale, from pipeline intelligence to RFP automation.

Go-to-market teams are under more pressure than ever. Buyers expect personalized outreach, faster responses, and deeper product knowledge, while reps juggle an ever-growing stack of tools. The AI operators featured here are flipping that equation — reclaiming thousands of hours, accelerating deal cycles, and turning every teammate into a top performer.

20%+ productivity gains

Already measured across sales activities, with leading customers pacing toward 50% productivity gains within 12 months.

10+ companies featured

Vanta, Clay, Brevo, PayFit, Persona, Alan, Patch, CMI Strategies, Mirakl, and Watershed — each with a different lens on how AI operators reshape revenue.

2 Sales Enablement & Knowledge Access

From fragmented documentation to a single source of truth

Problem → Fragmented knowledge. Sales reps waste hours every day searching for product information, competitive positioning, pricing details, and process documentation across scattered tools.

Solution → AI-powered knowledge agents. Deploy a knowledge agent: an AI agent that instantly retrieves and synthesizes information from product documentation, playbooks, sales decks, help centers, and internal wikis.

PayFit

Connected to a 500-page Notion knowledge base. Processed 15,000+ queries. Reduced product information lookup time from 5 min to 30 sec — a 10x improvement. Cut requests to Product and Operations teams by 50%.

Clay

GTM Knowledge Hub in Slack querying 100+ resources with priority logic. Achieved 100% adoption within the GTME team and 58 hours saved per month across 20 people.

"Dust democratizes information access, so it's no longer about who joined the company the earliest or who sits closest to the Head of Sales. Now there's just a single source of truth for everyone to point to."

— Caren Duane, Operations Team, Clay

The Reframe

Knowledge access is not a tooling problem; it is a routing problem. The win comes from a single agent that knows where to look, ranked by trust, instead of seven dashboards that each know a fragment.

3 Account Intelligence & Meeting Prep

From 15 browser tabs to a single account snapshot

Problem. Before every sales call, reps juggle 15+ browser tabs: CRM records, support tickets, product usage dashboards, call transcripts, LinkedIn profiles, and news articles. The result is incomplete preparation and lost selling time.

Solution → Account snapshot agents. Account Intelligence agents aggregate data from CRM, call transcripts, support tickets, product analytics, and the web to produce comprehensive account summaries in seconds.

Vanta — Automated QBR preparation

Cross-functional agents pull data from Finance, GRC compliance, Product, and Voice of Customer databases to generate pre-built slide decks with speaker notes. Saves ~400 hours per week across ~200 reps.

"It used to take hours. Now, with Dust, slides contain insights we would have missed before."

— **Danny Baralt**, Business Systems AI Solutions Lead, Vanta

95%

Reduction in outreach prep time at PayFit.

Key insight

Adoption at Watershed jumped from 20% to 90% after a structured enablement program — proof that a well-built agent only delivers ROI when the change-management work is taken seriously.

4 Personalized Outreach at Scale

Multi-agent workflows that turn 30 minutes of research into seconds

Problem. Generic outreach doesn't work. But crafting truly personalized emails takes 30+ minutes per prospect when you need to research the company, review past interactions, and tailor messaging.

Solution → Multi-agent email generation.

Brevo's multi-agent workflow

Step	What happens
1	BDRs select target contacts from their pipeline
2	Dust pulls prospect history from Supabase + LinkedIn/web enrichment
3	Specialized sub-agents handle different personalization angles
4	Three personalized email variants generated with unique hooks
5	Results written back to Supabase, ready for CRM sequencing

80%

Time reduction on email personalization. 2,500+ production actions executed since launch.

"Dust turned our RevOps team into builders. We went from zero AI in production to thousands of automated actions, and we never had to write a ticket to engineering."

— **Alexandre Le Goupil**, Head of Revenue Systems and AI, Brevo

The Reframe

The unlock is not "AI writes emails." It is composition: small specialized agents — researcher, angle-finder, writer, QA — chained into a workflow that the RevOps team owns end-to-end.

RFP & Post-Meeting Automation

Two patterns that reclaim hours every week

RFP & security questionnaire automation

Enterprise sales teams spend dozens of hours per week filling out RFPs and security questionnaires. The most effective pattern uses two agents working in tandem.

Agent 1 — Drafter

Generates responses using historical submissions, current documentation, and standard compliance frameworks.

Agent 2 — QA judge

Reviews each answer for accuracy, completeness, and consistency against known standards.

90% faster

RFP response times at Persona. Human review time drops from 3–4 hours to 15 minutes with the two-agent pattern.

Post-meeting follow-ups & CRM automation

After every sales call, reps face 20–30 minutes of admin. PayFit and Alan automated this entirely:

- Categorizes discussions using the **MEDDICC framework** automatically
- Identifies follow-up actions and flags points needing clarification
- Generates standardized summaries for CRM entry
- **500+ account summaries** generated per week at Alan
- **84%** of Alan employees are weekly active Dust users

"We have Dust agents that do account summaries, meeting transcriptions, CRM updates, follow-up email generation. This allowed Alan to reach 20%+ productivity gains in Sales and Marketing."

— **Charles Gorintin**, CTO, Alan

6

GTM Engineering & RevOps

Sellers who architect revenue systems through automation

GTM Engineering: a new function

A new role is emerging at the intersection of sales and engineering: the **GTM Engineer**. These are sellers who architect revenue systems through automation.

Clay — Powering 4x team growth

Valued at \$1.5B with 8,000+ customers. Dust is the backbone of Clay's GTME team's knowledge infrastructure. New hires ramp in days, not weeks. Handles 10+ monthly product integrations. Query patterns reveal enablement gaps for continuous improvement.

"Dust is the most impactful software we've adopted since building Clay. It delivers immediate value while continuously getting smarter and more valuable over time."

— **Everett Berry**, Head of GTM Engineering, Clay

Revenue Operations transformation

RevOps teams are becoming builders of production workflows. Brevo's team built three production-grade workflows without engineering support:

Workflow	What it does
Customer Referral Finder	Instant CRM queries for relevant customer examples by industry, size, and product usage
Personalized Email Pipeline	End-to-end from data enrichment to CRM-ready email sequences
Dynamic Landing Pages	Personalized marketing pages generated from form submissions

Key insight

The shift from "RevOps as request-takers" to "RevOps as builders" is the single biggest organizational change AI is bringing to GTM. The teams that get this right become a revenue-generating function instead of a cost center.

7 Product Marketing Intelligence

From sample-based analysis to comprehensive coverage

From sample-based to comprehensive analysis

Alan's Product Marketing team faced a classic scaling challenge: with a growing volume of sales calls, PMMs could only manually analyze a small sample. Their AI agents now analyze **100% of discovery calls**.

- Track sales narrative adoption across **all calls**
- Identify which messaging resonates and which falls flat
- Surface competitive objections and winning responses
- Deliver **weekly intelligence reports** to sales leadership

80% time reduction

Saving 18+ hours monthly across 3 PMMs — and delivering 10x more insights compared to the previous manual process.

"Before Dust, our PMM team spent 6–9 hours weekly analyzing just a sample of sales calls. Now, our custom AI agents automatically analyze ALL discovery calls. We've gone from subjective, sample-based insights to comprehensive, data-driven intelligence delivered weekly."

— **Evelien Hesters**, Product Marketing Manager, Alan

Specialized industry use cases

Patch — Carbon markets

Built Corporate Sustainability Decoder, Business Intelligence Agent, and Project Matching Agent (25,000+ projects). Data usage in sales calls jumped from 10% to 70% in three months. 70% of the team uses AI agents weekly.

Implementation Playbook & ROI

A proven 5-step framework — and the numbers that matter

The 5-step implementation framework

Phase 1

Identify your biggest time sinks

Step 01

Where do reps spend the most time on non-selling activities? Common starting points: meeting prep, CRM updates, knowledge search, RFP responses.

- ☒ **Audit** rep time by activity for two weeks
- ☒ **Rank** non-selling activities by total hours consumed
- ☒ **Pick** the top 1–2 with the clearest before/after metrics

Phase 2

Connect your data sources

Step 02

The value of an AI agent compounds with every system it can read. Start with the systems your reps already touch every day.

- ☒ **CRM** — Salesforce or HubSpot
- ☒ **Call transcripts** — Gong or Modjo
- ☒ **Documentation** — Notion or Google Drive
- ☒ **Communication** — Slack or Gmail

Phase 3

Build specific workflow agents

Step 03

Don't build one agent that does everything. Build specialized agents for specific tasks, each doing one thing exceptionally well.

- ✓ **Define** one job per agent
- ✓ **Compose** specialists into multi-agent workflows
- ✓ **Reuse** building blocks across teams

Phase 4

Pilot with 5–10 reps

Step 04

Get feedback, iterate on prompts, refine data sources. Track time savings quantitatively.

- ✓ **Recruit** an opt-in cohort of motivated users
- ✓ **Instrument** before/after time per workflow
- ✓ **Iterate** weekly on prompts and sources

Phase 5

Scale with enablement

Step 05

Embed DRIs on every team, run weekly office hours, and send adoption newsletters. Watershed drove adoption from 20% to 90% with this exact playbook.

- ✓ **Embed** a DRI on every GTM team
- ✓ **Run** weekly office hours and demo days
- ✓ **Publish** an internal adoption newsletter

Agent design best practices

- **Two-agent QA pattern:** pair a drafting agent with a review agent for accuracy-critical workflows
- **Multi-agent orchestration:** build domain-specific agents as reusable building blocks
- **Feedback loops:** track query patterns to identify knowledge gaps and enablement needs
- **Start high-impact, low-complexity:** account snapshots, knowledge search, and meeting follow-ups first

Measuring ROI: the numbers that matter

Metric	Range	Example
Weekly active adoption	70–100%	Clay: 100%, Vanta: 95%+
Time saved per rep / week	2–8 hours	Vanta: 2 hrs on QBR alone
Meeting prep reduction	80–95%	PayFit: 95%, Brevo: 80%
RFP response time	90% faster	Persona: 90%
Info lookup speed	10x faster	PayFit: 5 min → 30 sec
Team productivity	20%+	Alan: 20%+, pacing to 50%

Beyond time savings

- At **Alan**, productivity gains lowered acquisition costs enough to justify hiring more salespeople
- At **Brevo**, RevOps became a revenue-generating function instead of a cost center
- At **Clay**, AI-powered knowledge management makes 4x team growth possible
- At **Mirakl**, 30% of employees have built active agents, targeting 50%

"This significantly lowered their acquisition cost, allowing them to hire more salespeople."

— **Charles Gorintin**, CTO, Alan

The Future of AI-Native GTM

AI is not replacing the team — it's removing the friction

The companies featured in this ebook share a common insight: **AI agents are not about replacing people.** They are about removing the friction that prevents talented sellers, marketers, and operators from doing their best work.

The winning pattern

Phase 1

Treat AI as infrastructure, not a tool

Pattern 01

It's embedded in daily workflows, not used ad hoc.

- ☒ **Wire** agents directly into the systems reps already live in
- ☒ **Default-on** rather than opt-in for repeatable workflows

Phase 2

Empower AI operators across the organization

Pattern 02

At Mirakl, 30% of employees have built active agents.

- ☒ **Train** non-technical builders on agent design
- ☒ **Reward** the operators who ship reusable building blocks

Phase 3

Start with specific workflows, then expand

Pattern 03

Every company started with 1–2 high-impact use cases.

- ☒ **Pick** one painful workflow to prove ROI
- ☒ **Expand** outward as the data foundation matures

Connect your full data stack

Pattern 04

The value comes from synthesizing information across systems.

- ☑ **Unify** CRM, transcripts, docs, and product data behind one agent layer
- ☑ **Compound** value as each new source plugs in

"My background is in AI and deeply technical. So when I got to Vanta I was convinced it wasn't going to work. But now I'm a full believer. I've been converted."

— **Danny Baralt**, Business Systems AI Solutions Lead, Vanta
