

The AI-First GTM *Playbook*

Best practices and customer stories from Sales, Growth, GTM
Engineering, and Revenue Operations

WHY TEAMS CHOOSE DUST

Dust is the most impactful software we've adopted since building Clay. It delivers immediate value while continuously getting smarter and more valuable over time.

Everett Berry

Head of GTM Engineering, Clay

1

The AI-First GTM Revolution

A new role is emerging across every revenue function

A new role is emerging across go-to-market organizations: the **AI operator**. They exist in every GTM function — Sales, Marketing, RevOps, Growth, Enablement, Product Marketing — and they share a common trait: they don't just use AI tools, **they build the agent systems that make their entire team better.**

An AI operator in Sales builds agents that prep every rep before every call. In RevOps, they architect pipelines that update themselves. In Product Marketing, they deploy agents that analyze 100% of discovery calls instead of a 5% sample. The function varies, but the mindset is the same: *think in systems, build with agents, compound over time.*

This playbook presents the many colors of AI operators across GTM. Each chapter is a real use case, grounded in customer stories — from knowledge access to outreach at scale, from pipeline intelligence to RFP automation.

20%+

productivity gains

Already measured across sales activities, with leading customers pacing toward 50% within 12 months.

10+

companies featured

Each with a different lens on how AI operators reshape revenue.

2

Sales Enablement & Knowledge Access

From fragmented documentation to a single source of truth

PROBLEM Reps waste hours every day searching for product information, competitive positioning, pricing, and process docs across scattered tools.

SOLUTION Deploy a **knowledge agent** that instantly retrieves and synthesizes information from documentation, playbooks, decks, help centers, and internal wikis.

PayFit

10× faster lookups

Connected to a 500-page Notion knowledge base. Processed 15,000+ queries. Cut product-info lookup from 5 min to 30 sec, and requests to Product & Ops teams by 50%.

Clay

100% adoption

A GTM Knowledge Hub in Slack querying 100+ resources with priority logic. 100% adoption within the GTME team, and 58 hours saved per month across 20 people.

"Dust democratizes information access, so it's no longer about who joined the company earliest or who sits closest to the Head of Sales. Now there's just a single source of truth for everyone to point to."

— Caren Duane, Operations Team, Clay

The reframe

Knowledge access isn't a tooling problem; it's a routing problem. The win is one agent that knows where to look, ranked by trust — not seven dashboards that each know a fragment.

3

Account Intelligence & Meeting Prep

From 15 browser tabs to a single account snapshot

PROBLEM Before every call, reps juggle 15+ browser tabs: CRM records, support tickets, usage dashboards, transcripts, LinkedIn, and news. The result is incomplete prep and lost selling time.

SOLUTION **Account snapshot agents** aggregate data from CRM, transcripts, tickets, product analytics, and the web to produce comprehensive account summaries in seconds.

Vanta Automated QBR preparation

Cross-functional agents pull from Finance, GRC compliance, Product, and Voice-of-Customer databases to generate pre-built slide decks with speaker notes.

~400 hrs saved per week across ~200 reps

"It used to take hours. Now, with Dust, slides contain insights we would have missed before."

— **Danny Baralt**, Business Systems AI Solutions Lead, Vanta

95%

Reduction in outreach prep time at PayFit.

Key insight

Adoption at Watershed jumped from 20% to 90% after a structured enablement program — a well-built agent only delivers ROI when the change-management work is taken seriously.

4

Personalized Outreach at Scale

Multi-agent workflows that turn 30 minutes of research into seconds

- PROBLEM** Generic outreach doesn't work. But truly personalized emails take 30+ minutes per prospect — research the company, review past interactions, tailor the message.
- SOLUTION** Multi-agent email generation — small specialists chained into a workflow the RevOps team owns end-to-end.

80%

time reduction

Brevo's multi-agent workflow cut email-personalization time by 80% — with **2,500+ production actions** executed since launch.

"Dust turned our RevOps team into builders. We went from zero AI in production to thousands of automated actions, and we never had to write a ticket to engineering."

— Alexandre Le Goupil, Head of Revenue Systems and AI, Brevo

Inside the workflow

STEP	WHAT HAPPENS
1	BDRs select target contacts from their pipeline.
2	Dust pulls prospect history from Supabase + LinkedIn/web enrichment.
3	Specialized sub-agents handle different personalization angles.
4	Three personalized email variants generated with unique hooks.
5	Results written back to Supabase, ready for CRM sequencing.

5

RFP & Post-Meeting Automation

Two patterns that reclaim hours every week

RFP & security questionnaire automation

Enterprise teams spend dozens of hours a week on RFPs and security questionnaires. The most effective pattern uses two agents working in tandem.

Agent 1 · Drafter

Generates responses using historical submissions, current documentation, and standard compliance frameworks.

Agent 2 · QA judge

Reviews each answer for accuracy, completeness, and consistency against known standards.

90% faster RFP responses at **Persona** — human review drops from 3–4 hours to 15 minutes.

Post-meeting follow-ups & CRM automation

After every call, reps face 20–30 minutes of admin. PayFit and Alan automated it entirely:

- Categorizes discussions using the MEDDICC framework automatically.
- Identifies follow-up actions and flags points needing clarification.
- Generates standardized summaries for CRM entry.

500+ account summaries / week at Alan

84% of Alan employees are weekly active

"We have Dust agents that do account summaries, meeting transcriptions, CRM updates, and follow-up emails. This let Alan reach 20%+ productivity gains in Sales and Marketing."

— Charles Gorintin, CTO, Alan

6

GTM Engineering & RevOps

Sellers who architect revenue systems through automation

GTM Engineering: a new function

A new role is emerging at the intersection of sales and engineering: the **GTM Engineer** — sellers who architect revenue systems through automation.

Clay

Powering 4× team growth

Valued at \$1.5B with 8,000+ customers. Dust is the backbone of Clay's GTME team's knowledge infrastructure.

Days, not weeks

New-hire ramp time

10+ / month

Product integrations handled

Continuous

Query patterns reveal enablement gaps

"Dust is the most impactful software we've adopted since building Clay. It delivers immediate value while continuously getting smarter and more valuable over time."

— **Everett Berry**, Head of GTM Engineering, Clay

Revenue Operations transformation

RevOps teams are becoming builders of production workflows. **Brevo's** team built three production-grade workflows without engineering support:

WORKFLOW	WHAT IT DOES
Customer Referral Finder	Instant CRM queries for relevant customer examples by industry, size, and product usage.
Personalized Email Pipeline	End-to-end from data enrichment to CRM-ready email sequences.
Dynamic Landing Pages	Personalized marketing pages generated from form submissions.

Key insight

The shift from "RevOps as request-takers" to "RevOps as builders" is the single biggest organizational change AI is bringing to GTM. The teams that get this right become a revenue-generating function instead of a cost center.

7

Product Marketing Intelligence

From sample-based analysis to comprehensive coverage

Alan's Product Marketing team faced a classic scaling problem: with a growing volume of sales calls, PMMs could only manually analyze a small sample. Their AI agents now analyze **100% of discovery calls**.

- ✓ Track sales-narrative adoption across all calls.
- ✓ Identify which messaging resonates and which falls flat.
- ✓ Surface competitive objections and winning responses.
- ✓ Deliver weekly intelligence reports to sales leadership.

80%

time reduction — saving 18+ hours monthly across 3 PMMs, and delivering 10× more insights than the manual process.

"Before Dust, our PMM team spent 6–9 hours weekly analyzing just a sample of sales calls. Now our agents automatically analyze ALL discovery calls — from subjective, sample-based insights to comprehensive, data-driven intelligence delivered weekly."

— **Evelien Hesters**, Product Marketing Manager, Alan

Patch Carbon markets · specialized use case

Built a Corporate Sustainability Decoder, Business Intelligence Agent, and Project Matching Agent (25,000+ projects). Data usage in sales calls jumped from **10% to 70% in three months**; 70% of the team uses AI agents weekly.

8

Implementation Playbook & ROI

A proven 5-step framework — and the numbers that matter

01

Identify your biggest time sinks

Audit rep time by activity for two weeks, rank non-selling activities by hours consumed, and pick the top 1–2 with the clearest before/after metrics — meeting prep, CRM updates, knowledge search, RFPs.

02

Connect your data sources

An agent's value compounds with every system it can read. Start with what reps already touch daily: CRM (Salesforce/HubSpot), transcripts (Gong/Modjo), docs (Notion/Drive), comms (Slack/Gmail).

03

Build specific workflow agents

Don't build one agent that does everything. Define one job per agent, compose specialists into multi-agent workflows, and reuse building blocks across teams.

04

Pilot with 5–10 reps

Recruit an opt-in cohort of motivated users, instrument before/after time per workflow, and iterate weekly on prompts and sources.

05

Scale with enablement

Embed a DRI on every GTM team, run weekly office hours and demo days, and publish an adoption newsletter. Watershed drove adoption from 20% to 90% with this exact playbook.

Agent design best practices

- **Two-agent QA pattern** for accuracy-critical workflows.
- **Multi-agent orchestration** — domain agents as reusable blocks.
- **Feedback loops** — track query patterns to find gaps.
- **Start high-impact, low-complexity** — snapshots, search, follow-ups first.

Measuring ROI: the numbers that matter

Beyond time savings

- At **Alan**, productivity gains lowered acquisition costs enough to justify hiring more salespeople.
- At **Brevo**, RevOps became a revenue-generating function instead of a cost center.
- At **Clay**, AI-powered knowledge management makes 4× team growth possible.
- At **Mirakl**, 30% of employees have built active agents, targeting 50%.

"This significantly lowered their acquisition cost, allowing them to hire more salespeople."

— Charles Gorintin, CTO, Alan

METRIC	RANGE	EXAMPLE
Weekly active adoption	70–100%	Clay 100%, Vanta 95%+
Time saved / rep / week	2–8 hours	Vanta: 2 hrs on QBR alone
Meeting prep reduction	80–95%	PayFit 95%, Brevo 80%
RFP response time	90% faster	Persona: 90%
Info lookup speed	10× faster	PayFit: 5 min → 30 sec
Team productivity	20%+	Alan: 20%+, pacing to 50%

9

The Future of AI-Native GTM

AI is not replacing the team — it's removing the friction

The companies in this playbook share one insight: AI agents aren't about replacing people. They're about removing the friction that prevents talented sellers, marketers, and operators from doing their best work.

The winning pattern

01

Treat AI as infrastructure, not a tool

Wire agents into the systems reps already live in; default-on rather than opt-in for repeatable workflows.

02

Empower AI operators across the org

Train non-technical builders and reward operators who ship reusable building blocks. At Mirakl, 30% of employees have built agents.

03

Start with specific workflows, then expand

Every company started with 1–2 high-impact use cases, then expanded as the data foundation matured.

04

Connect your full data stack

Unify CRM, transcripts, docs, and product data behind one agent layer; value compounds as each new source plugs in.

"My background is deeply technical. So when I got to Vanta I was convinced it wasn't going to work. But now I'm a full believer. I've been converted."

— **Danny Baralt**, Business Systems AI Solutions Lead, Vanta
